

WEST 8'S DE NIEUWE KERN WINS ARC AWARD FOR URBAN DESIGN

13-11-2020

De Nieuwe Kern has been bestowed with the ARC Urban Design Award from De Architect, the leading Dutch architecture media platform.

The Nieuwe Kern is a major 131ha urban development adjacent to Amsterdam, creating 4,500 new homes and approximately 200,000m² of social and commercial facilities.

The continuous district benefits from the qualities and characteristics of the city in the east, and the historical landscapes of the Amstel river in the west. The plan unifies the development with its rich geographical context, prioritizing the landscape and creating a large central park. This world-class quality green space serves as the foundation of a robust spatial framework.

The design proposes a clear identity to counterbalance the current fragmentation caused by existing transportation routes and public transport nodes, the adjacent Amsterdam ArenA sports complex, and varying water levels. The team works with a sound consultant to create smart solutions for the noise pollution caused by Schiphol Airport.

The ARC Award jury praised De Nieuwe Kern's 'thoroughness of design' and the display of 'craftsmanship'. We congratulate our clients and all partners of this project:

Clients

NS Vastgoed/NS Stations
VolkerWessels Vastgoed
Gemeente Amsterdam

Consultants

Fugro
BBN
Ingenieursbureau Amsterdam
Waternet
Martijn Lugten
